AI LAB-11

Aim: Implementation of NLP programs

Problem Formulation: Solving a dataset using NLP.

Problem Statement: Building a spam classifier to predict if the given SMS are spam or not using NLP.

Algorithm used (Problem Solving): Naïve Bayes

Human Language is modified into fragments or tokens which can be understood by the machine. Like in this problem, SMS collected from different sources will be tokenized and then analyzed and classified as to whether they are spam or not.

After using NLP to modify the data, Naïve Bayes is used for the classification task. Naïve Bayes classifiers are a collection of classification algorithms based on Bayes' Theorem. It isnot a single algorithm but a family of algorithms where all of them share a common principle, i.e. every pair of features being classified is independent of each other.

Dataset:

```
Go until jurong point, crazy.. Available only in bugis n great world la e buffet... Cine there got amore wat.
 Ok lar... Joking wif u oni...
Free entry in 2 a wkly comp to win FA Cup final tkts 21st May 2005. Text FA to 87121 to receive entry question(std txt rate)T&C's apply 88452810075over18's
U dun say so early hor... U c already then say...
Nah I don't think he goes to usf, he lives around here though
FreeMsg Hey there darling it's been 3 week's now and no word back! I'd like some fun you up for it still? To ok! XXX std chgs to send, £1.50 to rcv
Even my brother is not like to speak with me. They treat me like aids patent.
 As per your request 'Melle Melle (Oru Minnaminunginte Nurungu Vettam)' has been set as your callertune for all Callers. Press *9 to copy your friends Callertune
WINNER!! As a valued network customer you have been selected to receivea £900 prize reward! To claim call 09061701461. Claim code KL341. Valid 12 hours only.
Had your mobile 11 months or more? U R entitled to Update to the latest colour mobiles with camera for Free! Call The Mobile Update Co FREE on 0800298
 I'm gonna be home soon and i don't want to talk about this stuff anymore tonight, k? I've cried enough today.
SIX chances to win CASH! From 100 to 20,000 pounds txt> CSH11 and send to 87575. Cost 150p/day, 6days, 16+ TsandCs apply Reply HL 4 info
URGENT! You have won a 1 week FREE membership in our £100,000 Prize Jackpot! Txt the word: CLAIM to No: 81010 T&C www.dbuk.net LCCLTD POBOX 4403LDNW1A7RW18
 I've been searching for the right words to thank you for this breather. I promise i wont take your help for granted and will fulfil my promise. You have been wonderf

 Oh k...i'm watching here:)
 Eh u remember how 2 spell his name... Yes i did. He v naughty make until i v wet
 Fine if that⊞s the way u feel. That⊞s the way its gota b
England v Macedonia - dont miss the goals/team news. Txt ur national team to 87077 eg ENGLAND to 87077 Try:WALES, SCOTLAND 4txt/ú1.20 POBOXOx36504W45WQ 16+
 Is that seriously how you spell his name?
```

The dataset has 5574 rows, i.e. 5574 data entries. The SMS are classified as 'ham' and 'spam'. 'Spam' means that the SMS is spam and 'ham' means that the SMS is spam.

Code:

```
In []: import pandas as pd

In []: messages = pd.read_csv('SMSSpamCollection', sep='\t', names=["label", "message"])

In []: messages
```

Out[]:		label	message
	0	ham	Go until jurong point, crazy Available only
	1	ham	Ok lar Joking wif u oni
	2	spam	Free entry in 2 a wkly comp to win FA Cup fina
	3	ham	U dun say so early hor U c already then say
	4	ham	Nah I don't think he goes to usf, he lives aro

	5567	spam	This is the 2nd time we have tried 2 contact u
	5568	ham	Will ü b going to esplanade fr home?
	5569	ham	Pity, * was in mood for that. Soany other s
	5570	ham	The guy did some bitching but I acted like i'd
	5571	ham	Rofl. Its true to its name

5572 rows × 2 columns

```

         [nltk_data] Downloading package stopwords to /root/nltk_data...
         [nltk_data] Package stopwords is already up-to-date!
Out[]:
In [ ]:
          from nltk.corpus import stopwords
          from nltk.stem.porter import PorterStemmer
          ps = PorterStemmer()
          corpus = []
In [ ]:
         for i in range(0, len(messages)):
              review = re.sub('[^a-zA-Z]', ' ', messages['message'][i])
             review = review.lower()
             review = review.split()
              review = [ps.stem(word) for word in review if not word in stopwords.words('english')]
              review = ' '.join(review)
              corpus.append(review)
In [ ]:
          corpus
In [ ]:
         from sklearn.feature_extraction.text import CountVectorizer
         cv = CountVectorizer(max_features=5000)
         X = cv.fit_transform(corpus).toarray()
In [ ]:
         len(X)
Out[]: 5572
In [ ]:
        y = pd.get_dummies(messages['label'])
        y =y.iloc[:,1].values
Out[ ]: array([0, 0, 1, ..., 0, 0, 0], dtype=uint8)
In [ ]:
         print(len(y))
        5572
In [ ]: from sklearn.model_selection import train_test_split
         X_train, X_test, y_train, y_test = train_test_split(X, y, test_size = 0.2, random_state = 0)
```

Output:

```
In []:
    from sklearn.metrics import confusion_matrix
    confusion_m = confusion_matrix(y_test, y_pred)
    confusion_m

Out[]:    array([[946, 9],
        [ 8, 152]])

In []:    from sklearn.metrics import accuracy_score
    accuracy_score(y_test, y_pred)

Out[]:    0.9847533632286996
```

Output: Hence NLP is implemented to solve a SMS spam classifier.
